

## **Males Less Likely to Reveal STD to Partner**

From our Overview of Male Health Chapter:

“Of surveyed men diagnosed with an STD in the past 5 years, 14% had not told their partners, compared to just 2% of women.<sup>36</sup> In kind, 51% of adolescent males diagnosed with an STD had not talked about it with the ir partner, compared to 9% of adolescent females.<sup>37</sup>”
